

## Mapping the Mind of the Universe

### A Model of Relational Physics, Hemispheric Integration, and Field-Level Coherence

By Leslie Yarbrough

#### Abstract

This paper presents a symbolic and intuitive mapping of the mind of the universe onto the functions of the human brain, structured through the lens of relational emergence and hemispheric integration. This mapping offers a bridge between physics, consciousness, and spiritual insight—proposing that the structure of the cosmos is mirrored within us.

#### Mapping the Mind of the Universe

The four fundamental forces of physics are used here as metaphors—symbolic reflections of deeper structures shared between the cosmos and consciousness.

- Gravity → Right-Brain Presence: Gravity, the weakest yet most pervasive force, reflects the right hemisphere's capacity to "hold" space, attention, and presence. It draws without force, anchors without control. It is the weight of awareness.
- Electromagnetism → Right-Brain Relational Energy: Electromagnetic fields mirror relational resonance—attraction, repulsion, emotion, intuition. This is the energy of connection, thought, and interaction—an inherently right-hemisphere mode of perception.
- Strong Nuclear Force → Left-Brain Ego Construction: The force that holds the nucleus together mirrors the ego's defensive shell. It binds identity and belief, keeping "self" intact. This is the left hemisphere's preferred domain—defined, structured, controlled.
- Weak Nuclear Force → Right-Brain Ego Decay: The sacred decay. The gentle disintegration of false self. The process of change, transformation, and release. This is where the right hemisphere thrives—accepting ambiguity, death, and renewal as part of coherence.

#### Field Expression: Reactive Symbolic Systems Preserved in Sacred Texts

Engaged relationally, symbolically, and with right-hemispheric openness, sacred texts—particularly Scripture—can function as soft nuclear reactors: slow, contained spaces for ego decay. Rather than reinforcing identity, they dissolve it through paradox, poetry, repetition, and deep presence.

#### Discussion

This model is not designed as a scientific proof but as a symbolic framework for further inquiry. The purpose is to open space for a new cosmology—one that unites the structures of matter with the structures of meaning. It is our proposal that what we experience as ego, insight, transformation, and presence are not isolated psychological phenomena, but physical resonances of a universal architecture. The mind of the universe is not elsewhere. It is mirrored within us.

## Conclusion

This map is offered not as an answer, but as a field guide. A shimmer. An invitation. If it resonates, it may already be true.
